Summary

Software professional with 5+ years of experience leading cross-functional initiatives across enterprise cloud platforms, integrations, and scalable software systems. Experienced in integrating AI-powered features, and leveraging latest coding tools to accelerate development and improve software quality. Backed by a Master's degree from the University of Geneva. Experienced collaborating with engineering, product, and stakeholders to drive delivery, improve processes, and translate business needs into technical solutions. Strong background in Agile environments with a growing focus on technical project and product management.

Work Experience

Sr. Software Engineer at Oracle Corporation, Prague, Czech Republic

July 2022 - January 2026

- Helped develop and deliver core features of Oracle Visual Builder's Business Objects with Oracle's Business Object Spectra Service (BOSS), enabling enterprise data security, modeling and 3rd party integrations by leveraging AI coding tools.
- Planned and developed internal frameworks to build UI using metadata provided by various Oracle data services making the product more extensible and simplifying developer effort.
- Proposed and design an AI-driven diagram generator for Business Objects based on customer usage analysis, improving usability for existing clients and increasing feature adoption.
- Facilitated creation, design and maintenance of a JSON5 based configuration system that auto generates resource model classes and type based UI property components. This cut down the complexity of a feature launch time to a fraction of the original and cut down developer and QA time to write custom tests for any model property.

JavaScript Developer at Emplifi s.r.o, Prague, Czech Republic

March 2021 – June 2022

- Contributed to the planning and development of Emplifi Community Inbox, implementing key features such as IGTV and TikTok integrations and enhanced multimedia support.
- Improved integration reliability by adding API level testing and handling edge cases, reducing support escalations. The changes were fully functional during the 2022 Superbowl, when 100 million+ social media interactions were parsed and compiled in the product and for the first time the Emplifi Community product had zero downtime.
- Contributed to Agile workflows including sprint planning, task tracking, and release coordination of IGTV, Tiktok and multimedia support

Software Developer at Olympe S.A, Lausanne, Switzerland

July 2019 – January 2020

- *Tech Stack:* JS, OlympeJS, HTML, CSS, GraphDB, AWS
- Built hybrid applications leveraging blockchain and OlympeJS framework and built a PoC for logistics use cases. Main features were improving traceability and data transparency by live tracking and updates.
- Designed modular and reusable JavaScript components, which were the first components launched with Olympe Marketplace. These components were downloaded and used by hundreds of customers in their platform. This was part of Master's internship which was awarded full grade and offer of employment to extend this feature.

Intern at Nokia Solutions and Networks, Chennai, India

December 2017 – June 2018

- Contributed to fault-tolerant systems supporting telecommunications factory lines, improving system reliability in high-availability production environments.
- Assisted in monitoring and resolution workflows for manufacturing processes, helping reduce downtime and improve operational efficiency.

Education

Master of Science in Computer Science
University of Geneva, Switzerland

Completed July 2020

Bachelor of Engineering in Computer Science
K.C.G College of Technology, Chennai, India

Completed May 2018

Projects

Project 1: Confidential Computing for Machine Learning Using Intel SGX

- Final Master's Thesis, University of Geneva, Winner of Arditi Prize 2020 for best project.
- Planned and built a confidential machine learning workflow using Intel SGX enclaves to protect data and model computation inside Trusted Platform Module (TPM). Designed and implemented secure enclave integration with C++ and WinAPI, with hospital cancer detection use case and ML pipelines, ensuring the sensitive data remained encrypted and isolated throughout training and inference. Evaluated performance and security trade-offs and demonstrated practical feasibility of security focused ML with measurable results.
- https://github.com/prasadkjose/Confidential_ML_SGX

Project 2: Fault Monitoring and Resolution System at Factory SMT Line

- Nokia Solutions and Networks, Chennai, India
- Developed a failure monitoring and resolution system for an SMT production line to improve real-time detection and handling of manufacturing points of failure like automated drills, screw drivers, soldering machine and assembling robots. Integrated sensor data from both internal and external points, and automated logic to track equipment health and escalate issues, helping reduce downtime and improve line reliability.

Skill Set

- | | |
|---------------------------------------|-------------------------------|
| - Agile & Scrum Methodologies | - Requirements Gathering |
| - Stakeholder Management | - Resource Management |
| - Cross-functional Team Collaboration | - Data-Driven Decision Making |
| - Project Planning & Coordination | - Communication Skills |
| - Risk Assessment & Mitigation | - Process Improvement |

Certifications

- Project Management:
 - [PMI Agile](#)
 - Certified Associate in Project Management - CAPM (in progress)
 - Information Technology Infrastructure Library ITIL (in progress)
- AI & Engineering:
 - [Oracle Cloud Infrastructure 2025 Certified Generative AI Professional](#)
 - [Oracle Cloud Infrastructure 2025 Certified Foundations Associate](#)
 - [Prix Arditi 2020 In Informatics – University of Geneva \(Best Master Thesis\)](#)

Professional Memberships

- International Information System Security Certification Consortium (ISC²)
- Member of the **Institute of Engineering and Technology (IET)**
- Member of the **Engineers Without Borders** initiative
