

Dear Hiring Team,

I am writing to express my interest in the position of Deployed Software Engineer. I am a software professional with experience building secure, scalable applications with AI, supported by a Master's degree in Computer Science from the University of Geneva, Switzerland.

In my latest role at Oracle, I worked on enterprise-grade systems where security, reliability, and data protection were foundational requirements. I worked on Oracle Visual Builder and Business Objects (BOSS), where I helped develop and maintain enterprise applications that addressed business needs such as data management, workflow automation, reporting, security, and system integrations. My responsibilities included gathering requirements, designing technical solutions, developing APIs and backend services, troubleshooting issues, and collaborating with stakeholders to improve business processes.

Earlier in my career, I worked across web platforms, hybrid applications, and fault-tolerant systems, which gave me a strong appreciation for designing resilient software in real-world environments.

I genuinely enjoy working at the intersection of technology and people. Over time, I found that I am most engaged when I am understanding real customer problems and translating them into technical solutions. I believe this is a role where I can combine my technical depth with communication, ownership, and customer impact. I can also collaborate closely with engineers and clients across regions and have experience contributing to design discussions, code reviews, and long-term technical decisions.

I have worked across international teams in Europe, India, and the U.S., and I'm comfortable collaborating in fully remote, globally distributed environments.

Thank you for your time and consideration.

Sincerely,
Prasad Koshy Jose
