

Dear Hiring Team,

I am writing to express my interest in the position of Software Security Engineer. I am a software professional with five years of experience building secure, scalable applications, supported by a Master's degree in Computer Science with a specialization in Cybersecurity from the University of Geneva, Switzerland. I am interested in an entry-level security engineer role because I want to deepen my hands-on security experience and build a strong foundation in protecting real-world systems, while applying the engineering mindset I developed through my software background.

In my latest role at Oracle, I work on enterprise-grade systems where security, reliability, and data protection are foundational requirements. I have contributed to core platform features involving secure data modeling, cloud integrations, and metadata-driven frameworks, while collaborating with globally distributed teams. Earlier in my career, I worked across web platforms, hybrid applications, and fault-tolerant systems, which gave me a strong appreciation for designing resilient software in real-world environments.

My academic and project work, including confidential machine learning using Intel SGX, reinforced my interest in security engineering and Artificial intelligence. I understand the importance of threat models, failure modes, and how systems behave at scale, especially when trust and safety are critical. This mindset has guided my professional growth and is what motivates me to pursue roles where security is treated as a top concern.

I look forward to bring my experience in secure software development, cloud platforms, and cybersecurity to your team, while continuing to grow and contribute to meaningful, high-impact systems. I have worked across international teams in Europe, India, and the U.S., and I'm comfortable collaborating in fully remote, globally distributed environments.

Thank you for your time and consideration.

Sincerely,
Prasad Koshy Jose
