## Summary

AI Software Engineer with 5 years of experience designing, building, and optimizing secure AI software and applications using Python, TypeScript and C++. Experienced in integrating LLMs and generative AI into production applications, developing AI-assisted workflows, implementing RAG-based solutions, and leveraging AI coding tools to accelerate software delivery. Passionate about building practical AI solutions that automate workflows, improve user experiences, and solve real business problems. Backed by a Master's degree in Computer Science from the University of Geneva and a Bachelor's degree in Computer Science Engineering. Proven ability to work with globally distributed teams across startups and Fortune 500 companies, using modern cloud platforms, agile methodologies, and emerging technologies to deliver scalable, user-focused AI solutions on schedule.

---

## Work Experience

### Senior Software Engineer at Oracle Corporation, Prague, Czech Republic

July 2022 - January 2026

- *Tech Stack: JS/TS, JET, (P)React, NodeJS, HTML, (S)CSS, Java 21, OCI, Python, Cursor, LangChain, VectorDB, Git, JSON, and RESTful API's*
- Developed core features of Oracle Visual Builder's Business Objects with Oracle's Business Object Spectra Service (BOSS), enabling AI features and enterprise data security, modeling and 3rd party integrations by leveraging AI coding tools.
- Worked on internal frameworks to build UI using metadata provided by various Oracle data services making the product more extensible and simplifying developer effort.
- Designed and prototyped an LLM-powered Business Object Diagram Generator that transformed Business Object metadata into entity-relationship diagrams using prompt engineering and structured metadata extraction, based on customer usage analysis, improving usability for existing clients and increasing feature adoption.
- Helped create, design and maintain a JSON5 based configuration system that auto generates resource model classes and type based UI property components while enabling AI-friendly structured inputs for future automation. This cut down the complexity of a feature launch time to a fraction of the original and cut down developer and QA time to write custom tests for any model property.

### JavaScript Developer at Emplifi s.r.o, Prague, Czech Republic

March 2021 – June 2022

- *Tech Stack: JS/TS, React, NodeJS, HTML, CSS, Elastic Search, MongoDB, AWS, Bitbucket*
- Contributed to the development of Emplifi Community Inbox, implementing key features such as IGTV and TikTok integrations and enhanced multimedia support.
- Improved integration reliability by adding API level testing and handling edge cases, reducing support escalations. The changes were fully functional during the 2022 Superbowl, when 100 million+ social media interactions were parsed and compiled in the product and for the first time the Emplifi Community product had zero downtime.

### Software Developer at Olympe S.A, Lausanne, Switzerland

July 2019 – January 2020

- *Tech Stack: JS, OlympeJS, HTML, CSS, GraphDB, AWS*
- Built hybrid applications leveraging blockchain and OlympeJS framework and built a PoC for logistics use cases. Main features were improving traceability and data transparency by live tracking and updates.

### Software Development Intern at Nokia Solutions and Networks, Chennai, India

December 2017 – June 2018

- Contributed to fault-tolerant systems supporting telecommunications factory lines, improving system reliability in high-availability production environments.
- Assisted in monitoring and resolution workflows for manufacturing processes, helping reduce downtime and improve operational efficiency.

## Education

**Master of Science in Computer Science**  
*University of Geneva, Switzerland*

Completed July 2020

**Bachelor of Engineering in Computer Science**  
*K.C.G College of Technology, Chennai, India*

Completed May 2018

---

## Projects

### Project 1: Confidential Computing for Machine Learning Using Intel SGX

- Final Master's Thesis, University of Geneva, Winner of Arditi Prize 2020 for best project.
- Built a confidential machine learning workflow using Intel SGX enclaves to protect data and model computation inside Trusted Platform Module (TPM). Designed and implemented secure enclave integration with C++ and WinAPI, with hospital cancer detection use case and ML pipelines, ensuring the sensitive data remained encrypted and isolated throughout training and inference. Evaluated performance and security trade-offs and demonstrated practical feasibility of security focused ML with measurable results.
- [https://github.com/prasadkjose/Confidential\\_ML\\_SGX](https://github.com/prasadkjose/Confidential_ML_SGX)

### Project 2: Web based Linux Simulator for Portfolio

- A Linux-inspired portfolio web application simulating a terminal-based user interface built using TypeScript, ReactJS and styled components. It's built with modular component design and event-driven architecture for handling command parsing and window state. Implemented features such as simulated virtual file system structure, command execution logic, and dynamic rendering to mimic real Linux shell and GUI behavior. Built with primary focus on security, performance, and clean code organization, demonstrating practical understanding of full-stack development, CI/CD workflows, and security engineering.
- <https://github.com/prasadkjose/Linux-Portfolio>

### Project 3: Fault Monitoring and Resolution System at Factory SMT Line

- Nokia Solutions and Networks, Chennai, India
- Developed a failure monitoring and resolution system for an SMT production line to improve real-time detection and handling of manufacturing points of failure like automated drills, screw drivers, soldering machine and assembling robots. Integrated sensor data from both internal and external points, and automated logic to track equipment health and escalate issues, helping reduce downtime and improve line reliability.

---

## Skill Set

- **Programming Languages:** JavaScript/TypeScript, C++, Python
- **AI Tools:** Cline for VSCode/IntelliJ, Claude Code
- **Frameworks and APIs:** ReactJS, VueJS, WinAPI
- **Cloud Technologies:** Oracle Cloud - OCI , AWS
- **RDBMS:** Oracle 9i, MySQL
- **Languages :**
  - English — Native
  - French — Conversational (A2)

---

## Certifications

- AI & Engineering:
  - [Oracle Cloud Infrastructure 2025 Certified Generative AI Professional](#)
  - [Oracle Cloud Infrastructure 2025 Certified Foundations Associate](#)
  - [Prix Arditi 2020 In Informatics – University of Geneva \(Best Master Thesis\)](#)
- Cyber Security and Networks:
  - [ISC2 Certified in Cybersecurity \(CC\) 2025](#)
  - [Google Cybersecurity Professional Certificate 2025](#)
  - [Cisco Certified Network Associate \(CCNA\)](#)
