

Dear Hiring Team,

I am writing to express my interest in the Senior Technical Support Analyst position. I am a senior technology professional with 5 years of experience supporting and building secure, scalable systems, backed by a Master's degree in Computer Science from the University of Geneva, Switzerland.

In my most recent role at Oracle, I worked on enterprise-grade platforms where reliability, security, and performance were critical. Alongside development, I regularly investigated and resolved complex system issues, supported production environments, and contributed to improving system stability through proactive monitoring and root cause analysis. My experience working with cloud integrations, metadata-driven frameworks, and large-scale systems has strengthened my ability to troubleshoot effectively across multiple layers of an application stack.

Earlier in my career, I gained hands-on experience across web platforms, hybrid applications, and fault-tolerant systems. This background has given me a strong foundation in diagnosing technical issues, supporting end users, and ensuring consistent system performance in real-world environments.

I am particularly drawn to this role because it sits at the intersection of technology and user experience. I enjoy working directly with users, understanding their challenges, and translating those into actionable technical solutions. I bring strong communication skills, a sense of ownership, and a focus on delivering reliable support while continuously improving processes and documentation.

Having worked with distributed teams across Europe, India, and the United States, I am comfortable collaborating in fast-paced environments and contributing effectively across teams.

Thank you for your time and consideration. I look forward to the opportunity to contribute to your team.

Sincerely,

Prasad Koshy Jose
